		MICHAEL V PRIMARY E)				

U.S. Patent and Trademark Office PTOL-303 (Rev. 04-01)

Continuation Sheet (PTOL-303) 009/284,114

Application No.

Continuation of 2. NOTE: pg 2, lines 20-21, and pg 3, lines 1-7, do not suggest mice having characteristics of rheumatoid arthritis are obtained from an embryo deposited as BP-7790 as proposed and would require a new matter rejection. In particular, pg 3 describes the SKG strain as having characteristics of rheumatoid arthritis; applicants have not provided a nexus between the SKG strain and the embryos deposited as BP-7790. It cannot be determined from the specification that the embryos deposited are the SKG strain.

Continuation of 5. does NOT place the application in condition for allowance because: Applicants argue the mice described on pg 5-6 are back-crosses independent of the deposit. Applicants argument is not persuasive because no such conclusion can be made from the specification; the specification does not teach which embryos were used for deposit, nor is it readily apparent when the SKG strain was obtained during the back-crosses.
